Two Ways to Register

The student clickers transmit the i>clicker ID with every click. In order to identify which student is using which clicker, the students will need to register their clickers in a database. This can be done through the iclicker.com Web site.

A student only needs to register the clicker once, no matter how many courses are using the i>clicker. The information is stored in the same location and available to all classes using this i>clicker system.

iclicker.com Process

The students should do the following steps.

2. Click on the “Register Your i>clicker” button on the left of the page.
3. Enter your First Name and Last Name.
4. For your Student ID, enter your Blackboard Username (UM E-mail alias).
5. For your Clicker ID enter the numbers and letters below the bar code on the back of the clicker.
6. Enter the Verification Word.
7. Verify the data.
8. Submit to data.

Video Demonstration

Go to http://www6.miami.edu/bb/clickers/reg to watch a short video that demonstrates the registration process.

Most Common Error

The most common error is for students to enter their CaneID (C number) in the User ID entry, rather than using their Blackboard Username. This mistake will be discovered when the instructor synchronizes the clicker IDs and User IDs, explained later. If student have made this mistake they can repeat the registration process. Only the most recent registration information for a clicker is kept in the system.
